The RokCandy component is required for the syntax below to work.

All syntax below uses RokCandy, the content macro extension for Joomla. RokCandy converts simple, understandable and pre-defined syntax to complex HTML constructions.

If you wish to view the typography page, showing how to setup the various typography elements with HTML, then please go to the [HTML Typography page](#) .

If you would like to read more detailed information on inserting the included typography into your content, check out the [Typography Tutorial](#).
