

What is RocketLauncher?

RocketLauncher is a Joomla installation package that installs Joomla as the demo. The launcher installs the sample data, which has been customised to match the demo, and the template, extensions and images are already built in. The launcher is the best method to replicate the demo with ease.

Due to the complexity of our demos, it is much easier to *see it in action* than it is to read in written tutorials and / or viewing screenshots. Therefore, the process of using the template on your Joomla site is much faster, simpler and makes for a better experience.

Version

We use the latest Joomla version available at the time for our launchers and when Joomla updates, we proceed to update all the launchers so they are up to date for all new downloads. Please go to the [Joomla Downloads](#) repository to see what version the RocketLauncher is using.

For information on upgrading Joomla, please see: <http://docs.joomla.org>

RocketLauncher includes a FULL Joomla install, in addition to the template and demo contents. The Joomla installation process is necessary in creating the demo content, therefore RocketLauncher will only work properly as a new Joomla installation. It can not be used on an existing Joomla installation.

Instructions

Step 1 - Upload the files

- Download the Infuse RocketLauncher Package (Joomla_RT_Infuse_j15.zip) from the Infuse template downloads section
- Unzip the zip packaged onto your computer to reveal the *Joomla_RT_Infuse_j15* folder
- Upload this to your site using your FTP client

Note, on some servers, you can upload the zip and extract the package directly onto your server using cPanel or SSH access. For more details on this, please contact your hosting provider.

Step 2 - Installation

- Direct your browser to the installation such as www.yoursite.com/Joomla_RT_Infuse_j15

RocketLauncher

or to whatever directory your uploaded to

- Choose a Language for your site then click next
- Review the Pre-Installation Check page then click next
- Review the License page then click next
- Insert your Database information: host name, mysql username and mysql password then click next
- Insert your main configuration information: site name, admin password and email address
- Click Install Sample Data then click next
- Delete the /installation directory on your server

It is very important that you click the Install Sample Data button during the installation process, otherwise the launcher will be blank.
