Video Tutorial Currently Available!   Launch the Joomla Using Typography Video Tutorial now!

Every RocketTheme template is accompanied by custom content styles known as Typography. This guide outlines how to use Typography in your content.

Typography - RokCandy Mode

All the typography in the template have RokCandy syntax which is outlined at the RokCandy Examples
page. In this guide, we will use the Attention Span Style, which uses the
[span class=attention]...[/span]
syntax.

   - Login to the Joomla administrator
   - Go to **Content ☐ Article Manager**; or, if you wish to use the syntax in custom modules,
Go to   **Extensions ☐ Module Manager**
   - Choose the Article, or Custom Module
   - Insert **[div class="attention" class2="icon"]** *.... some content ....* **[/div]**
   - Save

As RokCandy is not affected by the stripping functions of the WYSIWYG editor, you can insert the RokCandy snippets without any issue. If you are in HTML mode, the snippets will still function.

Typography - HTML Mode

Every RokCandy typographical element can be used in its HTML form as outlined at the HTML Examples
page. HTML typography allows for more custom control in the article but requires an additional step. In this guide, we will use the Attention Span Style, which uses the
...
syntax.

Content Editor

   - Login to the Joomla administrator
   - Go to **Content ☐ Article Manager**; or, if you wish to use the syntax in custom modules,
Go to   **Extensions ☐ Module Manager**
   - Choose the Article, or Custom Module

Using Typography

- Click the **HTML mode** or equivalent in your editor
- Insert **<div class="attention"><div class="icon"> ... some content ... </div></div>**
- Save

If you are using the TinyMCE editor, go to **Extensions ▯ Plugin Manager** and select **TinyM CE 2.0** .
Locate
Code Clean-up on Save
and select
Never
.

This prevents the stripping of HTML code from your content.   **No Editor**

- Login to the Joomla administrator
- Go to **Content ▯ Article Manager**; or, if you wish to use the syntax in custom modules, Go to   **Extensions ▯ Module Manager**
- Choose the Article, or Custom Module
- Insert **<div class="attention"><div class="icon"> ... some content ... </div></div>**
- Save

Note, with the Content Editor (WYSIWYG) enabled, you need to enter HTML mode otherwise the typography will not work. If you are running no editor, this is not the case as you are interacting with the content at a code level.
